

# HS4 Release 4.1.14.0

Key	Summary
HS-1110	Event actions and triggers are saving the plugin NAME instead of ID
HS-1135	HsDevice and HsFeature retrieved from HS have a non-empty Changes dictionary
HS-1130	GetFirstLocationList and GetSecondLocationList don't work
HS-1129	HsApplication.GetAllDevices() throws an exception if one device or feature is badly configured
HS-1111	"Play a Sound" Event Action changes file extension to .wav over time
HS-1120	Scripts cannot access new IHSController API
HS-1134	Immediate command converted to a run script action after restart
HS-1047	Status Graphics Labels not working for ranges
HS-1006	Combine SEL and Standard Linux to a single build. Linux builds can now be updated through Setup.
HS-1115	Play sound not keeping order of clients, unable to enter manual client, action summary missing selected clients
HS-1119	<u>Updated code that generates device status</u>
HS-1131	Remove "Service Version: NO_VERSION" in exception thrown from HSCF

Plugin SDK updated to 1.2.3, release notes are here:

[https://homeseer.github.io/Plugin-SDK-Docs/release\\_notes/plugin\\_sdk\\_releasenotes\\_1\\_2\\_3\\_0.html](https://homeseer.github.io/Plugin-SDK-Docs/release_notes/plugin_sdk_releasenotes_1_2_3_0.html)

Windows Installer, or simply restart HS4 and the update will be downloaded.

[https://homeseer.com/updates4/SetupHS4\\_4\\_1\\_14\\_0.msi](https://homeseer.com/updates4/SetupHS4_4_1_14_0.msi)

For Zee S2/PI and SEL/PLUS update through setup

For standard Linux tar file:
