

Schedule Door Lock User Codes (HS3)

A how-to on scheduling door lock user codes in HS3.

With HS3, you can enable ("set") and disable ("remove") door lock user codes with events. This is particularly handy for scheduling access for house cleaners and other regular unattended visitors or guests. The example below includes two events: one for setting the user code and one for removing the user code. Each event is triggered by a time and a day.

The screenshot displays two event configuration panels in the HS3 interface. Each panel includes an event name, type, group reassignment, and a set of conditional triggers and actions.

Event 1: Enable user code Weds at 4 pm

- Event Name:** Enable user code Weds at 4 pm
- Type:** (Empty dropdown)
- Group Reassign:** Security
- IF:** The time is at 4:00:00 PM
- AND IF:** The day of the week is Wednesday
- THEN:** Z-Wave Actions
- Action:** Set a Security User Code
- Choose A Device:** First Floor Kitchen Door Lock Root
- Choose User Number:** User 17
- Enter Code:** (Input field with four dots)

Event 2: Disable user code Weds at 5 pm

- Event Name:** Disable user code Weds at 5 pm
- Type:** (Empty dropdown)
- Group Reassign:** Security
- IF:** The time is at 5:00:00 PM
- AND IF:** The day of the week is Wednesday
- THEN:** Z-Wave Actions
- Action:** Remove a Security User Code
- Choose A Device:** First Floor Kitchen Door Lock Root
- Choose User Number:** User 17
