

Resizing Widgets

This article will show you how to resize a widget on your dashboard.

On Android:

In order to resize a widget, long-press on its name until a menu appears, then tap **Resize**.

Resizing is done by dragging one of the four sides to make it bigger or smaller.

On iOS:

Tap the name of the widget to bring up the menu for it, then select **Edit widget** to go to the Create/Edit Widget page.

At the bottom of the page, select either **Slim**, **Medium**, or **Wide**. The height of a widget cannot be adjusted.
